DePaul University

FINAL INTERNSHIP PRESENTATION

DePaul Outreach & Application Data Analysis

PRESENTED BY:
Team 5

PRESENTED TO:
Excelerate Talent Discovery Team

Agenda

03	Introduction & Project Overview
04	Data Exploration & Cleaning
08	Key Analytical Insights
13	Dashboard Demonstration
17	Strategic Recommendations
18	Conclusion

Project Overview

Project Objective

To analyze DePaul's outreach and admissions data to:

- Evaluate recruitment performance
- Identify data quality issues
- Measure conversion effectiveness
- Provide data-driven recommendations

Internship Phases

- Week 1: Data Exploration
- Week 2: Data Cleaning & Funnel Analysis
- Week 3: Dashboard Development & Insights

Dataset Overview (Week 1)

Dataset Structure

Total Rows

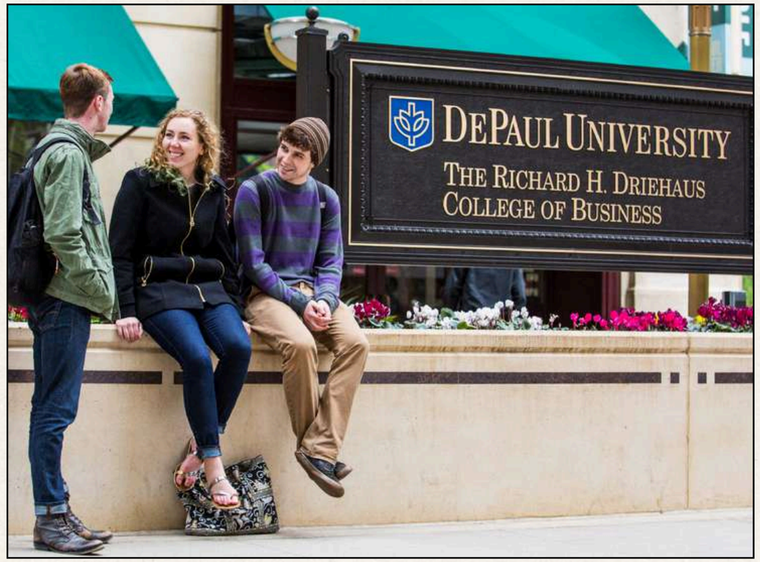
7,544

Total Columns

80

Duplicate Rows

1



Data Types Included

- Categorical variables
- Date/Time variables
- Numeric IDs
- Boolean fields

Dataset Theme

Student applications, outreach tracking, program interest, region, admission status, intake year.

Data Quality Assessment (Week 1)

Key Findings

- Some columns had 90%+ missing values
- “Major” column was 100% empty
- Only 1 duplicate row
- Many numeric fields were system IDs (not analytical)

Risk Identified

High column sparsity could reduce analytical quality.

Data Cleaning & Preparation (Week 2)

Cleaning Steps

- Removed empty columns
- Excluded system-generated numeric fields
- Focused on key variables:
  - Admission Status
  - Country & Region
  - Program
  - Caller_Name
  - Attempts
  - Intake Year
  -

Result

Cleaner, focused dataset for funnel and performance analysis.

Overall Admission Performance

From 5,000 analyzed records:

- Total Applications: 5,000
- Admitted: 3,256
- Pending: 1,744
- Acceptance Rate: 65.12%

Insight

Strong conversion rate → quality lead targeting.

Geographic Insights

Top Country

- India (2,684 applicants)

Other Key Countries:

- USA
- Ghana

Insight

India dominates applicant volume.

Risk

Over-reliance on one geographic market.

Program Performance

Highest Performing Program

- Business Analytics

Lowest Performing Program

- Information Systems

Insight

Programs with higher applications generate higher admissions.

Outreach Engagement Analysis

Critical Finding

- 3,194 students (63.8%) had ZERO contact attempts
- Only 36% were contacted

Insight

Massive outreach backlog.

This is a high-priority opportunity.

Contact Attempt Optimization

Admissions Peak at:

- 2–3 contact attempt.

After Too Many Attempts:
Admissions decrease.

Recommendation
Standardize 2–3 structured follow-ups.

Dashboard Overview (Week 3)

Interactive dashboard built in Looker Studio.

Includes:

- KPI Scorecards
- Country bar chart
- Program bar chart
- Admission donut chart
- Outreach performance table
- Interactive filters

Purpose: Executive-level decision support.

Counselor Performance

Top Performer

- Jagdeep

Lowest Performer

- Lavnaya

Major Issue

“NA” (No assigned caller) was the largest category.

Insight

Leads are not evenly distributed among counselors.

Trend Analysis

- Highest performance in 2022
- Decline in later intake years

Insight

Possible competition or outreach delay issues.
Requires further investigation.

Key Data-Driven Recommendations

1. Clear the 3,194 untouched leads immediately
2. Launch fast-track campaign for pending students
3. Diversify marketing beyond India
4. Standardize 2–3 outreach attempts
5. Reallocate counselor workload
6. Monitor intake-year performance regularly.

Strategic Impact

If implemented, these actions can:

- Increase final admitted numbers
- Reduce lead loss
- Improve counselor efficiency
- Reduce geographic risk
- Strengthen data-driven decision-making

Conclusion

This internship covered the full analytics cycle:

Data Cleaning → **Analysis** → **Visualization** → **Strategy**

Final Takeaways

- Strong conversion rate (65%)
- Untapped potential in pending & untouched leads
- Dashboard enables real-time monitoring
- Data supports smarter recruitment decisions

Thank you
